

What's Going On?

PostgreSQL 8.3

Peter Eisentraut

Prague PostgreSQL Developers' Day 2008

What's Going On

PostgreSQL is better and stronger than ever.

Better

- Full-text search integrated
- XML support
- Enums
- UUIDs
- Updatable cursors
- Plan invalidation
- Overhauled autovacuum

- Major performance improvements:

- Asynchronous commit
- Distributed checkpoints
- Heap-only tuples (HOT)
- Synchronized sequential scans
- Virtual transaction IDs

(Note: more buzzwords and initialisms as well ;-)

Stronger

- More development than we can handle
- Continuing process improvements
- Solid commercial ecosystem
- Solid community
- Great job market for PostgreSQL hackers
- PostgreSQL is part of critical infrastructure
- PostgreSQL is without alternative

Be Part of It

- Learn about the better PostgreSQL.
- Be part of the stronger PostgreSQL.

Be Part of It

- Learn about the better PostgreSQL.
- Be part of the stronger PostgreSQL.
- Enjoy the conference.
